

New Liquid Resin Art formulation !

Product information

April 2018

Resoltech's R&D team has been working on decreasing the yellowing of clear epoxy resins for years. **In October 2017, major improvements** were obtained and it has been decided to change the formula of our famous clear casting resin WWA.

Our objective for 2018 is to improve all Resoltech clear epoxy systems.

After several months of testing, Resoltech's R&D team is now glad to announce that the change of formula will now be applied to our clear flooring epoxy system : Liquid Resin Art !

What changes?

The picture below shows two samples : the old and new formula of Liquid Resin Art, both of them were **tested with UV ageing**.

After two months, the result shows a huge difference between the two samples, the old formula went yellow while the new formula stayed clear.

What doesn't change?

All the key properties of the Liquid Resin Art system are preserved :

- Perfect shiny finish
- Self leveling
- Up to 5mm by coat
- Same hardener/mixing ratio

When will it take place?

The change of formulation will take place the **27 of April**, all the orders placed after this date will be granted with the new version.
